WEBINAR - Onshape & SimForDesign:

Mar 18, 2016

11:00am EST

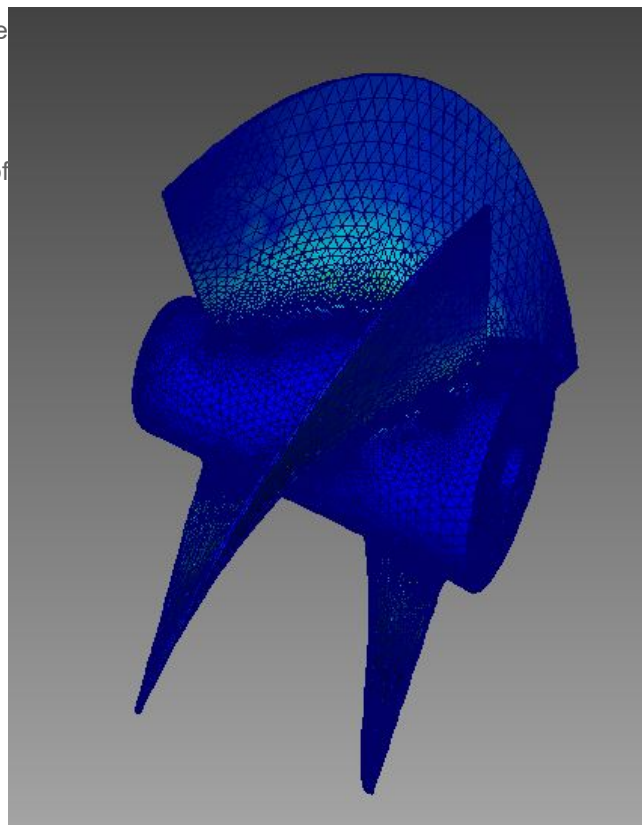

Onshape will host a webinar illustrating how SimForDesign can be used for simulation in the Onshape environment. SimForDesign offers the first (and only) fully integrated Onshape application for structural simulation. All simulations are run in the cloud from your Onshape document with SimForDesign: mesh, problem definition, results and a report are stored as tabs in your Onshape document.

SimForDesign is focused on simulation streamlined for designers and uses proven Finite Element Methods in a simple straightforward process that allows designers to efficiently evaluate and understand structural performance to make more informed design decisions. The streamlined simulation process used by SimForDesign allows structural analysis to be an integral part of your design process by removing the complexities and mystery related to setting up standard structural analysis of parts and small assemblies.

This webinar will illustrate how SimForDesign can be used in an Onshape document to make more informed design decisions.
