MeshGems awarded EcoSystem Prize

The [Ecosystem Prize](#) was awarded to Distene and its [MeshGems](#) Suite of Meshing Software Components at the 11th Systematic Annual Convention.

The [MeshGems](#) technologies aim at optimizing the link between CAD and the simulation-based design Industry. It targets more especially the CAD/CAE software developers. Integrated by more than 60 CAD/CAE software vendors such as ANSYS, Autodesk, CST, Dassault Systemes, LSTC, MSC.Software, Siemens PLM, and many others, MeshGems has established itself as the market leader in the world. Most CAE engineers the industry certainly already use this technology without even being aware of it. As a result of several Systematic collaborative projects, this innovation, which is “born from [Inria](#)“, was embedded into in-house applications of some major industrial companies, members of the [Systematic](#) Cluster.

With this [Ecosystem Prize](#), it is more than 1,000 participants who rewarded [MeshGems](#). They put thus the spotlight on this reference technology, which is by essence unknown because “hidden” into the CAD/CAE software products embedding it. With [MeshGems](#), it is the “French Tech Inside” which is rewarded.
