redway3D Partners with intrinsicSIM Providing Software Vendors with Tomorrow's Graphics Today

redway3D is pleased to announce that intrinsicSIM has signed a definitive agreement to add Redsdk and related add-ons to its portfolio of Embeddable Technologies for Engineering Applications. intrinsicSIM will partner with redway3D on business development and licensing of the Redsdk technology on a worldwide basis.

This cooperation leverages intrinsicSIM's engineering software knowledge & connections to broaden the use of Redsdk, redway3D's commercially proven next generation graphics technology.

Redsdk is a C++ programming toolkit dedicated to image visualization. It covers all the graphics features for real-time 2D, real-time 3D, and photo-realistic rendering using a single integrated API. Redsdk is highly customizable, flexible, and adapts itself to all operating platforms thanks to hybrid rendering technology that runs using graphics hardware or in full software mode. Redsdk integrated API also provides the ability to support high speed browser based visualization allowing real-time visualization of millions of facets on any device.
