REDsdk powers the 2D/3D graphics of BricsCAD for BIM

REDWAY3D is pleased to announce that REDsdk now powers the 2D/3D graphics of BricsCAD, edited by Bricsys. Bricsys is a global provider of .dwg engineering design software called BricsCAD. Bricsys is focused on providing an industrial strength CAD software platform and industry leading support at a compelling price to customers in the AEC, GIS, civil engineering, process and power, and mechanical CAD markets.

REDsdk provided faster and more scalable graphics for 2D drafting and 3D modeling while remaining compatible with a legacy software containing millions of lines of code. These productivity gains are available on Windows, Linux, MacOS & Cloud.

Here are some of the key benefits of REDsdk for BricsCAD:

- Can be plugged into legacy software architecture
- Improves both the real-time 2D & 3D performance and visualization
- Remains interactive on huge size models
- Multi-OS and Cloud support
